Clinic Visit

Overview

Purpose of visit A clinic visit reviews the following areas:

- Clinic operations,
 - Facility/environment
 - Customer service
 - Signage
 - Data system
 - Clinic flow
 - Equipment
 - Materials and information
 - Clinic intake and outtake tasks, and
 - Health and nutrition assessment and education tasks.
-

State staff responsible State office nutrition consultants complete clinic visits for their assigned agencies.

Review process During a review, the consultant will:

- Follow participants through the clinic, and
- Observe clinic activities for a specific task or position (e.g., intake, health assessment, nutrition assessment and education, and outtake).

Review tools A copy of the clinic visit review tool begins on page 2.

Note: WIC Coordinators are encouraged to use these tools for self-assessment activities throughout the year.

WIC Services Toolkit The “Iowa WIC Services Clinic Assessment Tools” document must be completed for the clinic that is scheduled for a clinic visit by State WIC office staff. The completed form should be posted to SharePoint one week before the scheduled clinic visit. Any staff member may complete the assessment (WIC Coordinator, Quality Improvement Lead, Support Staff, CPA, someone working outside of the WIC Program, etc.). This toolkit can be found on the WIC Web Portal.

Note: This toolkit is modified versions of the Mid-Atlantic WIC Services Toolkit and the Western Region WIC PCE Assessment Tools for Participant-Centered Nutrition Education and Services created by Altarum Institute.

Blood test (Hemocue)

	Meets/Exceeds	Not Met	Needs Improvement	Not Observed	NA
Previously collected data is used appropriately (215.72)					
If bloodwork was not taken, the appropriate reason is documented. Appropriate follow-up steps are taken, if applicable. (215.72)					
Follows bloodwork testing frequency (215.72)					
If bloodwork was deferred, was follow-up arranged?					
Procedure is explained to the parent/adult present with the infant/child using participant centered techniques					
Use accurate techniques for hemoglobin (215.72)					
Disposable gloves are used appropriately (215.72, 360.65)					
Change gloves after each participant. Gloves are not washed or disinfected after each use. (360.65)					
Clean finger with at least 70% isopropanol (215.72)					
Wipe away first 3 or 4 good-sized drops of blood (215.72)					
Do not “milk” the finger (215.72)					
Introduce the cuvette tip into the middle of the third or fourth drop of blood. Fill cuvette completely in one continuous motion (215.72)					
Skin prick is covered with a dry gauze and pressure is applied (215.72)					
Wipe off excess blood from both sides and back of the cuvette using the “butterknife” wipe technique (215.72)					
Discard lancet and cuvette in a puncture resistant container while still wearing gloves (215.72, (360.65)					
Close cuvette container after each use (215.72)					
Use universal precautions for blood samples (360.65)					
Explain results of hemoglobin test					
Participant referred to their health care provider when appropriate for high or low hemoglobin levels (245.60)					
Regular hand washing (360.65) or use non-water germicidal solution with at least 60% ethanol or isopropanol after seeing each participant Describe alternative method:
